How everything works

Before you touch anything, get to know the three pieces. It takes a few minutes and makes everything else easier.

The three pieces

1. The extension (Mi Zap)

- Installed in your Google Chrome
- Opens a sidebar next to your WhatsApp Web
- Shows each client's card, the funnel, notes and quick replies
- It's your control panel

2. Mi.IA

- The sales assistant powered by artificial intelligence
- Runs on a server, not inside your computer
- Answers your clients on WhatsApp and understands text and voice notes
- Alerts you when the client is ready

3. Your account. This is where your contacts, funnel stages, replies and campaigns live. Each company sees only its own data.

How a conversation unfolds

1. **The client sends a message**
   Text or voice note, at any time.

2. **Mi.IA replies**
   She understands what the client wants and uses the material you added.

3. **The card shows up in your sidebar**

You open the chat and already see the funnel stage and the notes.

4 **You step in at the right moment**
When the client asks for a visit or is hot, you get the alert and take over.

Good to know
The extension reads only the contact's phone number in the open chat. It doesn't read the text of your messages and doesn't send anything unless you ask it to.

What you'll learn

- Install the extension and connect your WhatsApp
- Get to know the sidebar and the funnel
- Teach Mi.IA to talk your way
- Import your contacts and organize them in a spreadsheet
- Run your first campaign, safely

Notice
Mi.IA and Mi Zap are not products of WhatsApp or Meta.

Install the extension

It takes about 5 minutes. Do one step at a time and only move on when the previous one is done.

Before you start

- You need **Google Chrome on a computer**. It doesn't work on a phone.
- Keep your phone's WhatsApp handy (we'll use it in the next lesson).
- You need the extension's **.zip** file that came with your invite.

Step by step

1. **Save the .zip file**
   Put it in a folder that's easy to find, like your Desktop.

2. **Extract the file**
   Right-click the .zip and choose **Extract All**. Then click **Extract**. A new folder will appear.

3. **Open Chrome's extensions page**
   Copy `chrome://extensions`, paste it into Chrome's address bar and press Enter. Chrome won't open that address from a click, so you have to copy and paste it.

4. **Turn on Developer mode**
   It's the switch in the top right corner. It should turn blue, or on.

5. **Click “Load unpacked”**
   The button appears in the top left corner once the mode is on.

6. **Pick the right folder**

6 Open the extracted folders until you find the folder called **MiZap**. Inside it there should be a file called `manifest.json`. Select that folder.

7 **Open WhatsApp Web**
Go to `web.whatsapp.com` (or refresh the page with F5). The extension's sidebar shows up next to the chat.

Don't delete the folder afterwards
Chrome uses that folder to run the extension. If you delete or move it, the extension stops working.

If something went wrong

What happened	What to do
Chrome says it couldn't find the manifest	You picked the outer folder. Open it and pick the **MiZap** folder, the one with `manifest.json` inside.
An old version was already installed	On the extensions page, click **Remove** on the old one. Then load the new folder.
I installed Mi Zap and Mi Central together	Keep only one turned on. Both use the same sidebar icon and get in each other's way.
The sidebar doesn't show up in WhatsApp Web	Refresh the page with F5. If it still doesn't show, check that the extension is turned on at `chrome://extensions`.

Stuck?
Talk to Mi.IA in the chat on the website and tell her which step you stopped at. She'll help you one step at a time.

Create your account and connect WhatsApp

Two things in this lesson: log in to your account and link your WhatsApp to Mi.IA.

Create your account

1. **Click the extension icon**
   It's in the top corner of Chrome. If you don't see it, click the puzzle-piece icon and pin the extension.

2. **Choose to create an account with an invite**
   It's the link under the “Entrar” (Log in) button.

3. **Fill in your details**
   Invite code (8 letters and numbers), your name, your email and a password. Click **Criar conta** (Create account) just once.

4. **Confirm your email**
   You'll get a message. Open it and click the confirmation link. Check your spam folder too.

5. **Log in**
   Go back to the extension and log in with your email and password.

Your 7 free days
The trial starts when the first agent at your company accepts the invite. During the trial, everything is unlocked, Mi.IA included.

Connect WhatsApp

Mi.IA answers from your own number. You don't change SIM cards or numbers: you just scan a QR code, like you already do for WhatsApp Web.

1. **Open the extension's WhatsApp tab**
   A QR code will appear.

2. **Grab your phone**
   Open WhatsApp, go to **Linked devices** and tap **Link a device**.

3. **Point the camera at the QR code**
   When it connects, the extension tells you on screen.

Safety tip
Use your work number if you can. That number will stay linked to Mi.IA.

If the connection drops
Refresh the WhatsApp Web page. If it still doesn't work, generate a new QR code and scan it again.

The sidebar and your daily routine

This is where you'll spend most of your time. When you open a chat, the sidebar shows everything about that client.

What shows up on the client card

- **Funnel stage:** where the client is in the sales process
- **Notes:** what you agreed with them
- **Mi.IA status:** whether she's handling this conversation
- **Property of interest** and the contact's owner

The buttons you'll use most

Button	What it's for
Eu assumo (I'll take over)	Pauses Mi.IA in this chat only. You talk to the client and, whenever you want, hand it back to her.
Não é cliente (Not a client)	Marks the contact as not a client (family, friend, supplier). Mi.IA stops talking to them.
É cliente, sim (Yes, they're a client)	Undoes the previous one. The contact gets answered again.

Quick replies

Ready-made messages you use with one click. You can save them per property, like the address, how visits work or the list of documents.

A simple routine
In the morning, open WhatsApp Web, see who's in “visit” or “hot” and start with them. Mi.IA has already left the card ready.

When Mi.IA alerts you

- When the client asks for a visit
- When the lead is hot
- When the client has been waiting 20 minutes for a reply

Build your funnel

The funnel is your sales pipeline: each client sits in a stage, from first contact to closing. The stages are yours to define.

Example stages

You can use these or create your own:

- New
- Talking
- Visit scheduled
- Offer
- Closed

How to customize it

- **Rename:** change the stage name to whatever makes sense to you
- **Change the color:** make the important stages stand out
- **Change the order:** put them in the order your sales actually happen

Less is more
Start with a few stages. Five or six are enough for most agents. You can change them later without losing anything.

Heads up
On the free plan you can only **view** the stages. To edit the funnel you need the Paid plan or the 7-day trial.

Teach Mi.IA to talk your way

On the **Minha Mi.IA** (My Mi.IA) screen you answer 8 questions. With them, Mi.IA learns who you are, what you sell and how to talk.

The 8 questions

Question	Example answer
1. Introduction How she should introduce herself	“I'm Mi.IA, assistant to agent John at Horizonte Realty.”
2. Area	“South Zone of São Paulo and Greater São Paulo.”
3. Type of property	“New apartments, off-plan and ready to move in.”
4. Properties	The name of each one and what she can or can't share.
5. Tone	“Friendly and direct. Short sentences. An emoji now and then is fine.”
6. Qualifying What to ask the client	“Household income, whether they have FGTS, whether they have a down payment, and the area they're interested in.”
7. Handing off to you	“When the client asks for a visit, prices, or to talk to me.”
8. Limits	“Never promise financing approval, discounts or delivery dates.”

How to answer well

- **Be specific.** “Friendly and short” works better than “professional.”

- **Write only what's true.** Mi.IA uses what you write. If you put in wrong information, she'll repeat it.
- **Use the limits.** Everything she can't promise should be written here.
- **Test and adjust.** Send a message to your number, see how she replies and fix any answer that didn't come out right.

> **Example of a formal tone**
>
> “Very formal and polite. Always address people as sir or madam. No emojis. Short sentences. End every message with: I remain at your disposal.”

Golden tip

The clearer you are about the limits, the safer you are. You're the one who decides price and terms.

Contact spreadsheet

Here you see all your contacts together, filter them, import your list and export it whenever you like.

What you see

- All contacts in one table
- Filters by property, stage and owner
- Grouping by property
- **Importar planilha** (Import spreadsheet) and **Disparo** (Bulk send) buttons

Column cut off?
If a name looks cut off, drag the column's edge to widen it.

Import your list

1. **Prepare the file**
   A spreadsheet with three columns: `nome`, `telefone` and `empreendimento` (name, phone and property). Keep these exact column names. The phone number must include the area code.

2. **Save as CSV**
   In Excel or Google Sheets, choose **Save as** and then **CSV**.

3. **Click Importar planilha (Import spreadsheet)**
   Choose the file and wait.

4. **Read the summary**

The screen shows how many contacts were new, how many already existed and how many were invalid.

> **Example file**
>
> nome;telefone;empreendimento
> Maria Silva;(11) 98888-7777;Residencial Aurora

Test first
The first time, import a small spreadsheet with just 1 or 2 contacts. That way you see the result before importing the whole list.

Invalid contacts

These are the ones without a valid phone number, for example with no area code or with letters. Fix them in the spreadsheet and import again. Contacts that already exist aren't duplicated.

Export

You can download your contacts whenever you like. Your data is yours.

Run your first campaign

A campaign is a message sent to many contacts at once. In the extension it has safety steps, so nothing goes out by mistake.

Read before you start
Bulk sending can get your number blocked on WhatsApp. The more messages per day, the higher the risk. That's why the extension sends slowly and only within set hours.

Step by step

Part 1: create the ad

1. **Open the Anúncios (Ads) tab**
   The ad is the text of the campaign.

2. **Pick the property**
   Pick the right property. The **Geral** (General) option applies to every contact that doesn't have its own ad, so double-check before saving.

3. **Write Message 1**
   The first message, short and friendly.

4. **Write Message 2**
   The second, sent right after, with an easy question to answer.

5. **Click Salvar anúncio (Save ad)**
   The property now shows up with a ✓.

> **Example of Message 1**
>
> Oi {nome}, tudo bem? Aqui é a Mi.IA, da Imobiliária Horizonte. Você pediu informações sobre o {empreendimento}. Ainda tem interesse?
> *(Hi {nome}, how are you? This is Mi.IA from Horizonte Realty. You asked about {empreendimento}. Are you still interested?)*

> **Example of Message 2**
>
> Posso te passar valores e condições?
> *(Can I share prices and terms with you?)*

Magic words
Write `{nome}` and `{empreendimento}` exactly like that, and the extension swaps in each contact's details.

Part 2: choose who receives it

1. **Open the Planilha (Spreadsheet)**
   All contacts come selected.

2. **Click Limpar seleção (Clear selection)**
   Select only the contacts who should receive it.

Part 3: create and activate

1. **Open the Disparo (Bulk send)**
   Check the groups. Anyone still marked “sem anúncio” (no ad) gets nothing.

2. **Set the number per day**
   The default is 20. Start small.

3. **Click Criar campanhas (Create campaigns)**
   This creates only **drafts**. Nothing is sent yet.

4. **Review**
   Look over the list of who will receive it.

5. **Click Ativar (Activate)**
   Only now does sending begin. The extension never sends on its own.

Rules that protect your number

- Messages go out **slowly**, one per minute per number
- **Monday to Saturday**, 9 am to 7 pm
- Anyone who asked to **opt out (SAIR)** never receives anything
- Anyone being handled by you or by Mi.IA doesn't receive anything
- Anyone who talked to Mi.IA recently is left out

Best practices

- **Start with 10 to 20 contacts a day** and increase gradually
- **Message only people who know you** or asked for information
- **Use different messages** and keep them short, never a wall of text
- **Reply fast** to anyone who answers. That's what keeps your number healthy

Volume alerts
Above 40 per day you'll see a warning, and the extension asks for confirmation before creating. Above 100 you'll see a bigger warning. Sending is at your own risk.

Team and invites

For anyone with more than one agent: how to invite your team and who can see what.

How to invite an agent

1. **Open the Equipe (Team) tab**
   It shows up for whoever runs the company.

2. **Generate an invite**
   The extension creates an 8-character code of letters and numbers.

3. **Send the code**
   The agent installs the extension, chooses to create an account with an invite and types in the code.

One code, one person
Once it's used, the code doesn't work again.

Who can see what

Role	What they see
Agent	Their own contacts and conversations
Administrator	All of the company's contacts, and can generate invites

Anyone who joins by invite **is never an administrator from the start**. Whoever runs the company decides who becomes an administrator.

Your data is kept separate

Each company sees only its own contacts, ads and replies.

Plans and free trial

Start with everything unlocked for 7 days. Then choose what makes sense for you.

Plan	Price	What's included
Trial	7 days free	Everything unlocked, Mi.IA included
Free	R$ 0	Client card and notes, quick replies, viewing the stages, connecting WhatsApp, setting up Mi.IA and a simple chatbot
Paid	R$ 199,90 per year	Everything in Free, plus an editable funnel, spreadsheet, reminders and scheduling, bulk send and team
Paid with Mi.IA	R$ 49,90 per month	Everything in Paid, plus Mi.IA answering on your WhatsApp. It's prepaid: you pay, then you use it.

Trial over? Your account goes back to the free plan on its own, with no surprise charges. Your contacts stay right where they are.

Common problems and final checklist

Come back to this whenever you need it. If you can't find your question, talk to Mi.IA in the website chat.

Common problems

Problem	What to do
The sidebar doesn't show up in WhatsApp Web	Refresh the page with F5. Check that the extension is turned on at `chrome://extensions`.
WhatsApp disconnected	Refresh WhatsApp Web. If it still doesn't work, generate a new QR code and scan it again.
Mi.IA didn't answer a client	Check that you didn't click **Eu assumo** or **Não é cliente** in that chat.
The campaign "created nothing"	The property has no ad. Save an ad in the Anúncios tab and try again.
The campaign I created isn't sending	It's still a draft. Click Ativar. Check the time too: only Monday to Saturday, 9 am to 7 pm.
A contact doesn't show up in the bulk send	They may have asked to opt out (SAIR), be in a conversation with you, or have talked to Mi.IA recently.
Invalid phone numbers on import	The area code is missing or there are letters. Fix them in the spreadsheet and import again.
I can't create my account	Check the invite code (8 letters and numbers) and confirm your email using the link you received.

Final checklist

- [ ] Extension installed and the folder kept somewhere safe
- [ ] Account created and email confirmed
- [ ] WhatsApp connected with the QR code
- [ ] The 8 questions in Minha Mi.IA answered
- [ ] Test done: a message to your own number to see her reply
- [ ] Funnel stages adjusted
- [ ] Contacts imported
- [ ] First ad saved and first small campaign created

Congratulations!
You've finished the course. Now practice with a few contacts and grow little by little.

Frequently asked questions

The questions that tend to come up at the start and as time goes by. Click a question to see the answer.

Installation and account

Does it work on a phone?

No. The extension works in Google Chrome on a computer, alongside WhatsApp Web. The phone is only used to scan the QR code.

Does it work in another browser, like Edge or Firefox?

The extension was built and tested for Google Chrome. We can't guarantee it works in other browsers.

Does it work on a Mac?

It works in Chrome on a Mac with the same steps. The only difference is extracting the file: double-click the .zip.

Chrome shows a warning about developer-mode extensions. Is that normal?

Yes. That warning appears because, for now, the installation is manual. Don't click disable. Once the extension is in the Chrome Web Store, the warning goes away.

Do I need to leave my computer on for Mi.IA to reply?

No. Mi.IA replies from the server, so she doesn't depend on your computer or on Chrome being open. Your phone does need to connect to the internet every so often: WhatsApp disconnects linked devices when the phone goes too long without a connection.

Can I keep using WhatsApp on my phone as usual?

Yes. You keep chatting from your phone and from WhatsApp Web. Mi.IA's conversations show up on your number.

I changed computers. Now what?

Install the extension again on the new computer and log in with the same email and password. Your contacts and settings live in your account, not on the computer.

How do I update the extension to a new version?

On the `chrome://extensions` page, click **Remove** on the old version. Then click **Load unpacked** and pick the **MiZap** folder of the new version.

How do I uninstall it?

At `chrome://extensions`, click **Remove**. To disconnect WhatsApp, open WhatsApp on your phone, go to **Linked devices** and log out of that device.

I forgot my password. What do I do?

Talk to support, through the website chat or on WhatsApp, and we'll help you get back in.

Mi.IA day to day

Does Mi.IA reply at any hour?

Yes. She answers messages that arrive day or night. Only the follow-up with people who went quiet happens between 9 am and 8 pm.

Does she understand voice notes?

Yes. She transcribes the client's voice note and replies. She can also reply out loud.

Does she talk about prices and terms?

She only says what you've added and allowed. If you don't want her to share prices, write that in the **Limites** (Limits) question on the Minha Mi.IA screen. For example: “Don't give prices. Hand over to the agent.”

Can she make mistakes or make things up?

She's built not to make things up, and she only uses what you've added. Even so, no AI is perfect. Read the first conversations, adjust Minha Mi.IA when something doesn't come out right, and use the **Eu assumo** button when you want to talk yourself.

How do I change the way she talks?

Open the **Minha Mi.IA** screen and change the answers, mainly **Tom** (Tone) and **Limites** (Limits). The change applies to future conversations. Then send a test message to your number.

Does she send photos and floor plans?

She sends the information and photos from the material you added. Automatically reading a reference website isn't available yet.

Does she talk to my friends and family?

If the contact isn't a client, open the chat and click **Não é cliente**. Mi.IA stops talking to them. If you change your mind, click **É cliente, sim**.

A client asked to stop receiving messages. What happens?

Anyone who asks to opt out stops receiving messages. In campaigns, anyone who asked for **SAIR** never receives anything.

How do I take over a conversation?

Click **Eu assumo** in the sidebar. Mi.IA pauses in that chat only. When you're done, hand it back to her.

Can I switch Mi.IA off completely?

In the extension you pause chat by chat. To switch her off completely, talk to support.

Will the client know it's an AI?

We recommend that she introduce herself as the agent's assistant, in the **Apresentação** (Introduction) question of Minha Mi.IA. That makes it clear to the client who is talking to them and builds trust.

Contacts and campaigns

How many contacts can I import?

Start with a few to test, then import the full list. If the import shows invalid contacts, fix the spreadsheet and import again.

I imported twice. Are my contacts duplicated?

No. Anyone who already exists shows up in the summary as “já estava” (already there).

Can I send a campaign to a purchased list?

We don't recommend it. Message only people who have a relationship with you or asked for information. That protects your number from being blocked and respects data protection law (LGPD, in Brazil).

I created the campaign and nothing was sent. Why?

The **Criar campanhas** button creates drafts only. Sending starts only when you click **Ativar**. Check the time too: Monday to Saturday, 9 am to 7 pm.

Can I send on Sunday or at night?

No. Messages go out Monday to Saturday, 9 am to 7 pm. This protects your number.

Why is the campaign so slow?

Messages go out one per minute per number. That's on purpose: sending too fast is what gets WhatsApp numbers blocked the most.

How many messages can I send per day?

The default is 20 per campaign, and you can change it. Above 40 you'll see a warning and the extension asks for confirmation. Start small and increase gradually.

I saved the ad for the wrong property. Now what?

Before activating the campaign, check the list. If it's still a draft, don't activate it. Fix the ad in the Anúncios tab and create the campaign again.

What do I do if my number gets blocked?

Stop creating campaigns and talk normally with the people who reply. If WhatsApp restricts the number, you can ask for a review inside the app itself. We can't reverse WhatsApp blocks. That's why you should start small and use a work number.

Plans and payment

What happens when the 7-day trial ends?

Your account goes back to the free plan on its own. Your contacts stay there. Paid-plan features stay locked until you sign up.

What's the difference between the Paid plan and Paid with Mi.IA?

Paid (R$ 199,90 per year) has all the tools, without the AI. **Paid with Mi.IA** (R$ 49,90 per month) has all of that plus Mi.IA answering your clients on

WhatsApp.

How do I pay?

The payment method is arranged when you sign up. Talk to us through the website chat or on WhatsApp.

How do I cancel?

Talk to support, through the website chat or on WhatsApp, and we'll take care of it.

Do I need an invoice?

Talk to support to arrange it. We handle that directly.

Privacy and security

Does the extension read my conversations?

The extension reads only the phone number of the open chat's contact. It doesn't read the text of the messages and doesn't send anything unless you ask it to.

So how does Mi.IA reply?

To reply, Mi.IA needs to receive the messages your clients send to your number. That's done on the server, and the text is used by an artificial intelligence service to put together the reply. Each company sees only its own data.

Can another company see my contacts?

No. Each company's contacts, ads and replies are kept separate.

Can I take my contacts with me?

Yes. You can export your spreadsheet whenever you like.

Could WhatsApp block my number for using the extension?

The extension isn't an official WhatsApp or Meta product, and tools like it carry risk. That's why sending is slow, only during business hours and with an opt-out option. Use a work number, start with a few contacts and message only people who expect to hear from you.

Help and support

Where do I ask a question that isn't answered here?

Talk to Mi.IA in the chat on the sales page. She answers technical questions and walks you through installation. If she doesn't know, she hands you over to support.

How do I describe a problem to support?

Tell us what you were doing, what showed up on the screen and, if you can, send a photo of the screen. The clearer it is, the faster we can fix it.
